Many of Photoshop's features are saved as presets in the Preferences window. For example, a preset is the tool default when you're working on an image in an editable layer, or when you are working in a standard layer. Different kinds of preset settings are available for the most common features. For instance, there is a preset for a standard, raster-based editing environment. This book is not a Photoshop tutorial. That would require a book of its own, and while Photoshop is indeed sophisticated, it isn't hard to understand. The purpose of this book is to provide Photoshop users with a basic understanding of the core concepts of image manipulation so that they can start using Photoshop to change, enhance, and improve their images. Images in this book are sampled in the following ways: • Some are presented in grayscale; others are processed in RGB (red, green, blue) and CMYK (cyan, magenta, yellow, black) colors. • Some are presented in a vector style, including some of the figures. • Some images are processed in a real time mode (continuous changes appear as you manipulate the image) and a snapshot mode (changes are present but don't appear until you save the file). # **Understanding Layers and the Different Types of Layers** The most basic function of Photoshop is to work on individual layers. Layers are a highly organized way of editing images. The layers are either part of the background image, or they're part of a separate image. A layer consists of one or more files, or images, in which you apply different kinds of changes, such as: • Blending effects (Color Replacement/Replacing) • Adjustment layers (Adjustment/Levels) • Curves • Gradients • Layers of text and patterns • Retouching • Retouching a photograph • Selections • Transparent patterns Note: Layers don't have to be individual, rectangular images; they can also be raster images, a mix of raster and vector images, or even purely vector images. The concepts in the following list are the foundation of understanding layers. It helps to understand the basic rules of the layer system before you get started. • **A layer is:** A basic image that is open in Photoshop. You can make another layer from this layer using

Updating bios as a team is a great idea. Another form of collaboration is to create a wiki. There are alot of different things you can do in a wiki, but a great way to have a global view of your bioses is to create one that links to the files on your hard drive and be sure that you update your own bios in the same format each time. Another application of a wiki is that you can write stuff in it and others can read it. It is almost like a sort of collaboration between the bios and the wiki. Here is a link to an excellent guide for how to set up a basic bios with a wiki:Encouraging and facilitating partnership for health promotion: lessons from the construction of Eurydice's programme. As health care becomes increasingly privatised, public programs, like Eurydice (Living With Epilepsy in New Zealand), play a central role in ensuring that their members do not fall through the cracks. This article outlines the challenges that Eurydice faces in partnering with a large New Zealand health care provider who had not previously coordinated services. It draws on an ethnographic study in a North Island city over a 14-month period. This study explores the complexities of Eurydice's relationship with this provider, summarising it as a practice of encouraging partnership to facilitate health promotion. Institutional discourses and efforts to maintain control have made it difficult for Eurydice to work with the provider's health care team, and to provide ongoing services to members. At the same time, however, the relationship has been central to Eurydice's survival and growth, ensuring its community base, membership, and financial viability.Q: What is the latest release of Visual Studio 2012 Express Beta for Mac? Q: How to bind filterType like RangeFilter in comboBox using WPF? I'm trying to bind the value of my combobox with a RangeFilter. I'm doing a method named GetFiltered() that returns a Boolean and takes a TimeSpan type of filterType. Then, I have a combobox which allows me to choose the filterType. It's working well if I bind the value property with the defaultText property, but I would like to make sure it's done with the RangeFilter. Here is the XAML I have: The class: public class HelperClass { public List Filters = new List(); public HelperClass() { for (int i = 0; i
