syllabus for computer graphics  $AR = \frac{1}{4} \times AA$ . In practice, the error may be larger than this factor, particularly if the reflection occurs near the edges of the display or when a large field of. However, if the reflections are limited to the center of the display, the error is much less than  $AR$ . If the simulation requires that the triangle be dropped at each step, it should include a check for zero error before calling `break_thru_mesh`. [157-181]  $AR = \frac{1}{4} \times AA$ . In practice, the error may be larger than this factor, particularly if the reflection occurs near the edges of the display or when a large field of. However, if the reflections are limited to the center of the display, the error is much less than  $AR$ .
