.Shape Measurement of Artificially Created Soils Using Microtomography. The trend to create soils from nonsoil particles (NSNP) in order to address sustainability and climate changes represents an opportunity for agriculture because it transforms nature's hard substrate into a flexible medium. The removal of NSNPs from soils could potentially influence the fertility, hydration, and other properties of the original soil. This study applied microtomography to measure the shape of NSNPs and the distance between NSNPs and soil to study the effect of NSNPs on soil properties. We found that the presence of NSNPs in soil had no effect on the amount of water retained and the hydraulic conductivity. However, we did observe that NSNPs were difficult to settle in most soils, which can be explained by their small particle size. The study also showed that the particles with small mean particle diameters were separated in soil aggregates where their mean particle diameters were markedly larger than their separation distance from soil aggregates. This finding could be explained by the fact that such NSNPs were able to bind to soil aggregates easily in the laboratory, but their removal from soil was difficult due to their larger size. The Stephen's Ales Brewery Releases "Hop Fest" Toronto, ON – Wednesday July 3, 2019 – The Stephen's Ales Brewery is proud to announce the release of Hop Fest, a beer that pays tribute to Toronto and shows how much the city supports the craft brewery movement by the way the beer is packaged. Hop Fest is a beer that's officially styled as an "international and North American-style pilsner," or Plopniks or Plonk for short. Since Stephen's Ales specializes in crafting beers with roots in Bohemian and German traditions, Hop Fest is certainly the beer that fits that description best. This is a bright beer, perhaps a bit lighter than the rest of the season, and one that we might even consider the beer of summer. Plonk, anyone? Hop Fest has a multitude of flavors sure to please any palate. Of course, it's meant to taste like a crisp and refreshing brew, but you'll also notice floral and citrus hop notes, a touch of sweetness, and a hint of bitterness in the finish

She is 13, in middle school, and her name is Heather. Heather and her mother are Muslim. They are the only Muslims in their school (the school is predominantly Christian) and they don't feel comfortable in the way they are being treated in school. To make a long story short, Heather's mother has taken time out from work to be with her daughter and to help her understand that she is not at all the way she presents herself. I've put together this booklet for the newer converts in our Muslim community. To be clear: you are a new Muslim if you do not have at least a vague knowledge of what Islam is (or, at the very least, if you have been taught Islam when you were a child). The booklet also applies to older converts, but if you are at a point in your life where you know your faith well, you may want to skip reading it and just focus on the "Basic New Muslim" information on the back. The booklet is about understanding "non-Muslims". The main problem we have is that many people are negative towards Muslims and use stereotypes to build their knowledge about them. This booklet is for you if you think that you: Ignore 3e33713323
