ShutdownIt is a small software application developed specifically for helping you perform shutdown-related tasks, such as log off, restart, or hibernate, with the aid of a countdown timer. It can be deployed on all Windows versions out there. Drop it on pen drives The tool is portable so it does not require any kind of installation process on the target computer. A double-click on the executable file is all you need to do in order to gain access to the configuration panel. In addition, you may open it without having administrative privileges. Plus, a forced mode can be turned on in order to make sure the actions are carried out successfully. What's more, you can start or stop the countdown timer, check out the current and estimated time, show or hide the current time and left time, reveal a progress bar in the main window, adjust the size of the font, display warnings before performing an automatic task, and play custom sound notifications (WAV file format).
