AutoCAD was the first commercially successful desktop CAD application. AutoCAD is often the first such application purchased by CAD professionals or students. Autodesk first introduced AutoCAD in 1982 to the commercial market. The current version, AutoCAD LT 2018, was released in February

---

2018. AutoCAD is the world's most popular commercial CAD software. In 2018, AutoCAD was used to create 788,000,000 DWG drawings, making it the third most popular CAD software product in the world. According to Autodesk, more than one billion DWG drawings were created using its AutoCAD software in 2017. AutoCAD is the main CAD application among

---

professionals in various industries including architecture, construction, mechanical engineering, and civil engineering. Engineers, architects, and designers also use AutoCAD for scientific, artistic, educational and game-related projects. AutoCAD LT is a version of AutoCAD that is optimized for smaller business and home use. For home and smaller business users,

---

AutoCAD LT is the right choice. AutoCAD LT 2018 was introduced in February 2018, with the latest LT in mind. The release of the latest version should not be taken as a sign of stagnation, but rather a sign of growth and a very solid base to build on. When AutoCAD LT was first introduced, many users were looking for a mobile app, but users of the desktop application wanted to see a

---

mobile app as well. So, in addition to a mobile app, AutoCAD LT 2018 contains a web app. This means that for both users of the desktop application and users of the web and mobile apps, users of the desktop application can leverage cloud computing to create drawings. Whether you are a professional or hobbyist, AutoCAD has something for you. AutoCAD is designed for

---

professional designers and architects. AutoCAD is the perfect tool for architectural design. AutoCAD was designed by architects and engineers from the outset. AutoCAD can be used by architects, civil engineers, mechanical engineers, and just about any professional who wants to design and produce their own technical drawings. There are many advantages to working

---

with the desktop application,  
including: – No need to leave  
your desk or buy an expensive  
tablet or smartphone –  
Windows-based systems are the  
most common to find on  
desktops and laptops.

---

memory formation is the form of long-term potentiation (LTP) in the hippocampus. It is well-established that LTP is triggered by  $\text{Ca}^{2+}$  influx through N-methyl-D- aspartate (NMDA) receptors at the postsynaptic site, and its maintenance is regulated by  $\text{Ca}^{2+}$ -dependent deactivation of NMDA receptors in the postsynaptic site. However, there are still many

---

fundamental questions about the details of the regulation of LTP. In this proposal, we are aiming to determine the exact mechanism of deactivation and investigate the possibility of direct activation of NMDA receptors by  $\text{Ca}^{2+}$  influx, both of which are considered to be essential processes for the maintenance of LTP. We recently found that deactivation of NMDA receptors is
