Image Editing with Photoshop Photoshop is a raster image editor. A raster is a bitmap image where each pixel is a dot in an image. Many images consist of thousands or even millions of pixels and are used for everything from your desktop wallpaper to your inkjet photographs. Image editing with Photoshop is similar to using Microsoft's Paint. You can add text, lines, and shapes to an image, fill in white areas, and crop the edges. You can also add images to an image, rotate the image, flip it vertically or horizontally, and even perform some mathematical transforms. The most basic features of Photoshop are * 2 Windows where you can view the screen * The Layers palette where you can organize your image's layers * A Windows palette * The menu bar where you can select commands Let's start off by opening up a new image. Step-by-step download tutorial Building a Photoshop-like app for Android Updated: September 18, 2019 Original: January, 2020 Making a photo album Original tutorial about the same thing, from January, 2017 This tutorial is now out of date: Get the updated version here More about PhotoEffects from here Introduction We want to create a photo editing app that can export images to Facebook or Discord, to name a few. The three apps we will be using will be Facebook, Discord and Line. These are three of the biggest social networks on the web, representing a big majority of web users, and with Line you can even use the service from your own server. Facebook allows you to customize your profile and lets you browse through your friends' profiles as well as post pictures and comments. Discord allows you to connect with other players and also provides a chatroom that you can use to discuss different things. We will use the Facebook SDK to integrate a Facebook login and once the user successfully logs in, we will show the user a list of their friends and allow them to see their friend's profile picture. Once the user selects a friend, we will show the profile picture in the gallery view of the app and allow them to take a picture of the friend. Once they have taken a picture we will pass the image to the Facebook SDK to upload it to Facebook. This is the basic process we will follow to build this app: Integrate the Facebook SDK to request the user's friends list Get the profile picture of the selected friend Display the profile picture in a gallery View allows users to take a picture of the friend and save it to the gallery Use the Facebook SDK to upload the picture to Facebook We will start by requesting the user's list of friends and save their list in a list of names that will be used to fetch the profile pictures of the users' friends later on. Connecting to Facebook with the Facebook SDK Let's start by enabling Facebook permissions in the Facebook app on Android. We will be using the Facebook SDK to access the user's friend list and we need these permissions to be able to access these services: public_profile Friends.read Here is how to request the friends list:

```
private void requestFriends() { FacebookSdk.sdkInitialize(getApplicationContext()); Session.openActiveSession(this, true, 05a79cecff
```

You can make advanced retouching, color corrections, and special effects by using Photoshop's Liquify (lasso) tool, feature, or adjustment tools. You can convert video, image, or sound files to other formats, adjust your monitor's settings, or create compelling images by using the Photoshop filters. One of the most useful Photoshop commands is the undo command, which allows you to undo previous actions you have performed on an image. You can also use Free Transform to resize, rotate, or move images, and with Layer Masks, you can control how an image is applied to a layer. In this tutorial, we will show you how to use the clone stamp tool to remove objects from a picture. We will use the Liquify tool (lasso tool) to edit our objects and make them disappear. First, we will import an image and set up the new document in Photoshop. Then, we will add a clone stamp to the new document. We will use the clone stamp to remove a colored disk object from the image. After that, we will adjust the clone stamp settings, and we will erase the background color from the layer. Finally, we will save the document. Import the image we will use for this tutorial. The image we will use in this tutorial is called "nebulae.jpg" and it can be downloaded from our Resources page. Open the image in Photoshop and close all the others Photoshop documents. Open an empty document, and use File ► Save as. Save the file as "nebulae_back.psd" into the same folder as the image. It's a good idea to save the file in a folder for this tutorial, because you want to have a backup of the document, and your work. In the new file, the height and width of the new document should be the same as the height and width of the imported image. Place the image on the new document. Use the Rectangular Marquee tool (M) to select a part of the image. The selected area of the image is shown in the Center image above. Click and hold on the Rectangular Marquee tool (M) to create a new selection. The new selection is highlighted blue in the right image. Click and drag across the paper to select a new area of the image. Keep the selection active by holding down the Ctrl key (Windows) or the Command key (Mac
