RevBayes For PC

- Contains the Bayes' rule of inference - Feature-rich features - Simple easy to use interface - Integrated into Rev4dna - Sufficiently small to run on any Windows version of R (both 32-bit and 64-bit) RevBayes Features: - Bayes' rule of inference - Well-known Markov chain Monte Carlo (MCMC) analysis - Bayesian inference - 3 types of prior distributions that are simple to use - Runs with two types of priors by default - Assigns probabilistic values to the sequences and search for the most probable tree - Allows the use of Rev4dna - Various useful features for improving the results - FreewareThis invention relates to an optical character reader of the type capable of reading optical characters on a document such as a bank check wherein the bank check is moved relative to the optical character reader in two perpendicular directions, and more particularly, to an optical character reader and method which will automatically check out an image of the bank check for print quality. Heretofore, an optical character reader has utilized a light beam to read the entire line or character, the line or character being scanned point by point. Upon reading each character, the relative position of the character to a reference point on the document being read is determined. A key being depressed on the keyboard will cause the optical character reader to read each character in sequence. It is frequently necessary to check out the printed characters on the document prior to being transmitted or processed. For example, the characters on a bill are sometimes checked for print quality by utilizing a scale which is impregnated with a colorant, the color of the colorant being representative of the quality of the print

on the document. When the scale and/or the document are moved in relation to the optical character reader, the character print quality can be checked prior to reading the character. A problem with providing a scale with a colorant is that the scale can fall off the document and will not be noticed until after the document has been moved relative to the optical character reader.This invention relates generally to weight control devices and more particularly to weight control devices which, when applied to the epidermis of the obese or overweight individual, cause the excess fat to be expelled through the pores and out of the skin, and a method of using the same. There are numerous devices and techniques which have been proposed for the control of one's weight. Most of the devices
