The mechanisms by which 1,25-dihydroxyvitamin D3 (1,25D3) and angiotensin II (AngII) modulate calcium transport across the calvaria were investigated. Both 1,25D3 and AngII significantly decreased calcium transport across the calvaria and the dose-response curve for 1,25D3 was shifted to the right compared with the curve for AngII. 1,25D3 and AngII reduced the expression of the type I and II calcitriol receptors.
