Once released in 1982, AutoCAD gradually evolved into a product offering a range of tools for use in a number of specific technical disciplines. Today, the company publishes additional apps for specific disciplines, such as stereolithography, digital sheet metal, and CAESAR. AutoCAD also provides 2D drafting tools that can be used in conjunction with AutoCAD, as well as toolsets for 3D modeling and architectural design. AutoCAD has been at the forefront of the desktop CAD market since its introduction. The complete range of AutoCAD applications is known as "Autodesk Digital Design", and is used in several industries for a range of CAD tasks. AutoCAD is used for 2D drafting, 3D modeling, as well as architectural design. In addition, the software is used by the maintenance, engineering, and manufacturing industries for their most common CAD

tasks, including design, analysis, drafting, and documentation. AutoCAD is used for general architectural design and as a drafting and design tool in many different industries. Following the introduction of AutoCAD, Autodesk was quick to enter the market for design and development software. Initially, the company released a desktop-only application named DRAW; this was followed by a number of versions of DWG. The Autodesk dBase database engine was used as the basis for Autodesk's spreadsheet software product called DYNA. The company has since sold or ceased operations of most of these products. The company now focuses on AutoCAD and other applications used in the Architecture, Engineering, and Manufacturing (AEM) disciplines.

#### History Origins

AutoCAD was first introduced as a desktop app for microcomputers running the CP/M operating system in 1982. Autodesk had originally been started in 1977 as a division of Computer Associates, Inc., a company that was started by two IBM programmers to develop software for the IBM PC. The computer's graphical user interface (GUI) was similar to the Apple II operating system (OS) and was the first GUI to feature a "mouse" as an input device. The Apple II operating system, a GUI-based operating system, would be the most popular desktop computer OS for home and business use for the next 15 years. The Apple II operating system was later replaced by the Apple Macintosh OS, which would remain the dominant desktop OS for most of the 1980s. The original version

"We are always

open to discussing potential acquisitions. We look forward to discussing any proposals with potential buyers", a local AstraZeneca spokeswoman told SeeNews on Friday. The local unit of British drugmaker Reckitt Benckiser is currently in the process of setting up an M&A advisory group, which is expected to report in December. It is unclear whether this group will focus on potential acquisitions by local pharma companies. The local AstraZeneca unit, which was renamed Bona in 2016, has an order backlog of some 30 million euros (\$32.5 million). The company is eyeing the \$35-40 million market for potential acquisitions, depending on the size of the deal, the spokeswoman said. This year so far, Merck KGaA's local unit MSD has been the most active company, signing two M&A deals, first with Japanese drugmaker Eisai Co Ltd in April, and the second with local drugmaker Par Pharmaceutical, for a \$12.5 million net cash bid in June. Earlier this week, the local unit of Israeli drugmaker Nov
