About There's no difference between an ordinary person and a hero.

Because every one of us has a heart to help people. I started this site to give people a place to talk about how our community can help each other Pretreatment hypothyroidism in women with newly diagnosed breast cancer: prognostic value of tumor markers and biologic behavior. This study addresses the prognostic significance of pretreatment serum thyroid-stimulating hormone (TSH), thyroglobulin (Tg), and Tg-receptor antibody (Tg-RAb) levels in women with newly diagnosed breast cancer. TSH, Tg, Tg-RAb, and markers of tumor biology were measured in plasma of newly diagnosed patients (n = 225) and in healthy age-matched control subjects (n = 31). Breast cancer patients were followed for a median of 68 months (range, 1-157 months).

Elevated TSH (defined as a level > 2.5 mIU/L) was associated with significantly worse disease-free survival (DFS; P = .01) in univariate (P = .03) but not multivariate (P = .18) analyses. No significant associations were found between Tg, Tg- 6d1f23a050
