Download RegCleaner for Free Free Download RegCleaner RegCleaner is a utility for cleaning the registry from unwanted entries. All the applications installed on your computer, as well as the websites you visit in your browser, are stored in a special Windows registry, which, if necessary, contains information about where and when each of the application processes was executed, which allowed developers to separate the registry from the rest of the system. Like any other, this information can be corrupted and is not easy to remove. If the registry is corrupted, then all the applications on the system don't work the way they should, or don't work at all. The registry is a kind of Windows database, containing information about every folder, disk or file that has ever been loaded by the system. It is an important part of the system and, as with any such technology, the registry needs to be protected. There are several ways to protect the Windows registry. Listed below are the ways to protect the registry used on a Windows system. The Windows registry can be viewed using the registry editor, or there are several specialized sections within the registry editor that allow you to edit the registry in a user-friendly way. The figure below shows the Registry Editor. Figure 1: Registry Editor Registry protection The registry is protected in different ways, which vary depending on the version of the system you are using. The following is a list of the registry protections used in Windows.
