I am so glad that all the great reviews on the apple / iPad pro combo have been posted. At first I thought sketch was overpriced. But I love the fact that you have a complete drawing program where you can layer text, image, and effects. I think it will be perfect for pro designers. Not for everyone but definitely worth the money (I paid \$30).

Best app for the price (I think). There are many people who do not have an iPad Pro (I'm one of them)! But if you have an iPad Pro (and you need to buy a pencil for it) you should definitely try this out. I think that this is one of the best apps that iPad Pro has been made for. Such an elegant, easy to use software that says a lot about the new creative tool more app from Apple. Don't wait! Buy the pencil and try it out. I just returned from Paris where we spent a crazy amount of time on new form factor and creative applications. Proving once again that with the iPad my creative toolkit can easily replace the desktop or laptop in my studio. How thrilled I am to have that pencil and this app in my bag. I thought this was the best app I had seen on the iPad. So much so that it was posting this review in my inbox right away. And then I found out that I only had the old pencil. I went back home with my new pencil and this app. That's when things really got interesting. This is one of the first apps that really pulled me in. No wait, it's pulling me in now. I can't stop using this.

A little late, but am very happy to be one of the first to review this. With the new iPad line Apple has made a stunning upgrade to the iPad line. This app will be lightweight and become one of my favorites.

Love it
James

The lightroom is absolutely perfect for social media. It can make your favorite snaps look amazing and almost professional without all the time and expense involved in doing so; all done with ease. The difference between Photoshop and Premiere Pro is that in the former, there is no DVD/Media Project. With Premiere Pro, a media project is made up of media clips that you have shot, or media that was shot, by other sources as well as media that you have shot yourself. You may have two people, even more, shoot an event. No problem. More than likely, the two (or more) shoots will need to be archived separately. There will need to be specific naming conventions so that the clips are grouped together into a media project that can be ingested into a video editing program. These media projects are stored on the hard drive or RAID. Other things to note is that in addition to DVD, we mention media projects because various proxy codecs are used in order to encode the media into a format that can be ingested by the player. Also, if you keep multiple versions of the same shot as an asset on a disc, you want to make sure that the version is kept consistent for it. The great thing about Photoshop and the rest of Adobe Creative Cloud is that you can get it for free, for 30 days!
